

ANTI-SNAP

Makes your entrance door invincible

Figure: EPS cylinder

Anti-snap components

Make the entrance door invincible

Their function is simple, yet highly effective: the cylinder simply snaps at a rated break point in the event of a snapping attempt. The tampering attempt is registered and the remaining cylinder is blocked and rendered unusable. There is no way of breaking in without having to use a loud drill.

Your benefits at a glance

- › Modular design (SYMO)
- › Installed without having to replace the escutcheon or modify the door
- › Anti-snap unit made of specially hardened steel
- › Picking and drilling protection
- › TS 007:2014 3-star certification (British Standard Institut)

Plug elongation

The released bolt renders the rest of the cylinder unusable.

Hardened housing

Burglars will be unable to get past this hardened steel unit.

ICS

4KS

MCS

Available for all modular Systems (SYMO)

Anti-snap components – suitable for several systems

The anti-snap option is not system-specific and hence available for almost all EVVA locking systems. Please do not hesitate to ask your EVVA advisor for the systems suitable for anti-snap components that are available in your country.

Locking bolt

The monitoring pin releases the bolt upon a tampering attempt.

Rated break point

In the event of a snapping attempt, the cylinder breaks at this rated break point.

Great for your security

Protect what is important to you. Preferably with security solutions from EVVA.

You benefit from decades of experience: these solutions offer outstanding quality and innovative technologies.

The EVVA security card, patents and technology prevent key copies, illegal duplicate keys and key manipulations.

Increasing security with anti-snap components

A devastated home, looted offices or business premises – the shock and fear of something similar re-occurring is profound.

For this reason, protect what is important to you with the new EVVA anti-snap cylinder. Certified as per TS 007 BSI with 3-star certification, this cylinder complies with the strictest security requirements for increased protection at your entrance door.

Protects your door from the following tampering attempts:

DRILLING

PICKING

SNAPPING

BUMPING
