

access to security

# TAF

The cylinder featuring the temporary access function

## TAF cylinder | Makes your day easier

A mechanical solution that not only takes care of who is able to enter, but also when someone is authorised. As a result, the TAF cylinder allows you to grant your domestic support staff, your dog sitters or in-house service technicians exclusive access – whenever you want and for how long you want.

### Your benefits at a glance

- Exclusive access authorisations, e.g. for service staff
- Can be (de)activated at any time
- Available for ICS double- and thumb turn cylinders
- Easy to differentiate key functions thanks to design keys
- On the inside the TAF cylinder can be unlocked with all keys

 **Priority key**  
Locks in S/I position and can change the authorisation

 **Standard key**  
Locks in S/I positions

 **Service key**  
Locks in S position only

**Changing authorisation**  
Use the priority key to switch the cylinder  to the desired position

 **Service position**

 **Normal position**

### Access + changing authorisation

Parents are granted permanent access and they can change the authorisation on the cylinder.

### Permanent access

Children are always able to unlock the door.

### Restricted access

Third parties can lock the cylinder in S position only.

## The colour makes the difference

Perfectly identify the three different key functions used in TAF cylinders thanks to design keys. In our example, the red key can change the positions in which the key is removed from the lock and – just like the black key – it provides permanent access, whereas the blue key merely grants restricted access at certain times. As a result, your day-to-day activities become child's play.

## **Dream team** | TAF cylinder and design key

As if they were made for each other. The new design keys in black, blue and red in combination with the TAF cylinder. Design keys let you identify which keys are authorised to open which locks at a glance. Perfect support to organise your day-to-day activities.

The TAF cylinder is alternatively also available with ICS keys without coloured key bows.
