

New EVVA plant opened in Tišnov

The 30th anniversary of the EVVA subsidiary in the Czech Republic was celebrated with a glamorous opening of the new production facility attended by EVVA partners, employees, and a delegation from Tišnov City Hall.

With Power Plant strategy for the development of excellence

The new plant in Tišnov shows that EVVA is continuing to drive forward its expansion plans and is consistently implementing its Power Plant strategy. The associated investments bring EVVA substantially closer to its excellence development goal. The three designated production facilities are the new building at Wienerberg, which was completed towards the end of the year, the modernized production facility in Krefeld, Germany, and the new Green Field building in Tišnov. The "satellites" to produce customized and flexible requirements will be located on site at the various EVVA subsidiaries.

Larger, more efficient, modern

Planned to be built on a greenfield site, the state-of-the-art new building is around 600 m² larger and covers an area of around 1,600 m², thus enabling the production optimization aimed at in all power plants. As part of this, activities that were previously outsourced will also be carried out in Tišnov in the future. By the end of the year, all machines and production lines will have been fully installed and set up. From then on, access systems for the Czech Republic and Slovakia will be produced at the new EVVA plant in Tišnov. *"Our employees can look forward to a very attractive working environment and we will be able to welcome our partners and customers to a very prestigious production facility,"* says Martin Koudelka, Head of the EVVA subsidiary in the Czech Republic.

30th anniversary – and another record

Due to its strategic importance and modern design, the new plant is another milestone in EVVA's success story, which was also celebrated alongside the 30th anniversary of the EVVA subsidiary in the Czech Republic. In his opening speech at the atmospheric gala, attended by many partners, customers and employees, CEO of the EVVA Group, Stefan Ehrlich-Adám commented: *"30 years of EVVA in the Czech Republic represent a 30-year success story. Since the acquisition of GUARD in 2008, we have had a site in the Czech Republic. With highly modern architecture, highly modern infrastructure, we look forward to the next 30 years."* The Mayor of Tišnov also attended the celebrations and sent his congratulations: *"I would like to give you my best regards from the Tišnov town hall. I hope EVVA continues to make good decisions and wish you much success for the future."* Another highlight of the celebrations was an entry in the Czech book of records for the longest functioning cylinder, at 120 cm, ever produced in the Czech Republic.

Even though EVVA has been synonymous with innovation for over 100 years, the traditional company has always been concerned with preserving what is valuable. Therefore the findings from the early and late Stone Age (4,000 BC) and the Bronze Age (1,500-800 BC), discovered during construction, were dug out and preserved in close cooperation with the Archaeological Museum in Prague. Some of the findings were loaned to EVVA to be exhibited in the new building in Tišnov.

The video of the opening: <https://youtu.be/Z58RPXuWohs>

EVVA has been the epitome of mechanical and electronic locking systems of the highest engineering standard for a period of 100 years. What began in 1919 with the founding of the "Erfindungs-Versuchs-Verwertungs-Anstalt (EVVA), or the "Invention, Experimentation and Application Institute" in English, is crucial to our company philosophy today: we conduct our own research and development and produce our innovative access systems in-house. As a family-run business, EVVA is one of the most successful companies in its sector worldwide. We currently hold over 300 patents and are represented by subsidiaries in 10 European markets and by distributors all over the world.
