

access to security

ICS

Strong and reliable

Cylinders for every door requirement

ICS offers you all the cylinder types you need in your home.

Double cylinder
are suitable for interior and exterior doors and can be equipped with numerous versions and options.

Half cylinder
suitable for barriers, key switches, lifts and numerous other situations.

Thumbturn cylinder
allows convenient opening and closing without keys.

Cam lock
for mailbox systems and for secure storage in showcases and display cabinets.

ICS. Strong and reliable

With ICS, your system is more convenient, you have planning and investment security and can rely on its robustness and durability. ICS is a durable reversible key system with such a high calculation capacity that reserves for locking systems can already be taken into account during the planning phase. Be it office buildings, schools or student residences, ICS does it all.

**One key
fits all
doors**

ICS benefits at a glance

- › Enhanced data protection
- › For highly complex access systems
- › High levels of protection against burglary
- › Patent protection until 2038 at the latest*

ICS. Security you can feel.

A sturdy, strong key and cylinder ensure tangible security. The key is ergonomically shaped and very comfortable despite its thickness.

Well integrated security

With a thickness of 3 mm, the key is fully stable and resistant to bending. With the concealed recesses on the inside, illegal production using the 3D printing process is almost impossible.

The option for even more security

External key override or thumbturn cylinder. With the external key override option, it doesn't matter whether a key is inserted inside or not. You can always lock the door from the outside. A thumbturn cylinder also offers this security.

All-round protection
Copy keys, additional cylinders and lock charts are available from authorised EVVA Partners only upon providing proof of legitimacy, i.e. the EVVA security card.

Benefit from the security features
The reliable ICS cylinder technology offers lasting protection against illegal opening methods.

ICS. Combined with electronic access systems

ICS can be perfectly combined with EVVA electronic access systems. Electronic access systems are primarily used on the perimeters of a facility and where event logs and time-limited access are important. Electronic and mechanical access components can be locked with just one key: the combi key.

Practical, handy and appealing
ICS keys are optionally available in many different colours. The colour coding helps to easily distinguish between keys.

Innovation made in Austria.

Trust a family-owned business that has been researching, developing and producing for 100 years and operates in a respectful and cooperative way. EVVA – the European leader in mechanical and electronic access systems!
